Lesson 2 · Column graphs with positive and negative values

Name: _____ Class: _____ Date: _____

Learning intention: We are learning to read column graphs with positive and negative values and to explain patterns of internal migration.
Success criteria: □ I can explain bars above and below zero. □ I can identify the largest net gain or loss. □ I can describe the pattern for two regions with + / − data and years. □ I can explain a push or pull factor.

We do: Greater Adelaide and the rest of SA

Source: Australian Bureau of Statistics, Regional population, 2024–25 (released 31 March 2026), Table 4.

(a) **Identify** the year in which Greater Adelaide had its largest net loss. *(1 mark)*

_____

_____

(b) **Describe** the pattern shown for Greater Adelaide and the rest of SA. *(2 marks)*

Greater Adelaide _____ people in 2021–22 (_____), but it _____ people in each of the next three years, with its largest loss in _____ (_____). _____ the rest of SA gained people in every year, between _____ and _____.

(c) **Explain** one push or pull factor that could help explain why the rest of SA gained people in every year. *(2 marks)*
Factor → How → Link. Use: because · so · as a result

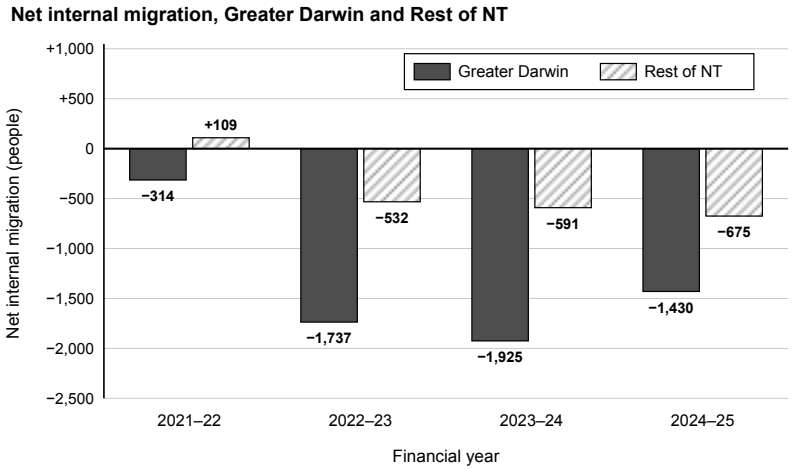

_____

_____

_____

_____

You do: Greater Darwin and the rest of the NT

Source: Australian Bureau of Statistics, Regional population, 2024–25 (released 31 March 2026), Table 4.

(a) **Identify** the year in which Greater Darwin had its largest net loss of people through internal migration. *(1 mark)*

(b) **Describe** the pattern shown for Greater Darwin and the rest of the NT. *(2 marks)*

(c) **Explain** one push or pull factor that could help explain why more people leave the Northern Territory than move there. *(2 marks)*

Extension: Greater Darwin lost people through internal migration every year. Explain how a region can lose people this way but still grow in population.

You do: scaffolded version

(a) Find the dark bar that goes furthest **below** zero. Its year is _____.

(b) Describe BOTH regions.

Region 1: Greater Darwin had a net _____ of people in every year, with its largest loss of _____ in _____.

Region 2: The rest of the NT _____ people in 2021–22 (_____), but then _____ people in each of the next three years.

gain | loss | gained | lost | +109 | −1,925 | 2023–24

(c) Choose ONE factor, then complete the frame.

Factor bank: hot, humid climate (push) · far from family and friends (push) · fewer jobs or services (push) · a high cost of living (push)

One push factor is _____.

Because _____,

more people leave the Northern Territory than arrive.

Exit ticket (or use a sticky note): Greater Adelaide's figure for 2022–23 is −1,201. In one sentence, say what this means.

_____

_____
